

STEELE 3690A HYDRAULIC DIE CHANGER

Speed die changeovers on the 90AD Extruder and minimize lost production.

The 3690A Hydraulic Die Changer can shear a large diameter, stiff clay column and will complete a die changeover in approximately 60 seconds. The extremely heavy-duty construction features a 10" ID by 36" stroke hydraulic cylinder.

The 3690A mounts on the standard 90AD Extruder front barrel with the addition of a circular liner clamp ring. It accepts standard 90 die holders for all models of STEELE dies.

This die changer requires a pump with a capacity of approximately 12 gallons per minute of oil at 1000 to 1600 psig. A hydraulic power pack to operate the 3690A is available. The Steele Model B Load Controller or equivalent is required since there is no shear pin.

Instead of having an entire crew manhandling heavy components, you can complete die changeovers with the push of a lever using the Steele 3690A Hydraulic Die Changer.

Weight: 8,290 lbs (3,760 Kg)
